NAME

gnome-gmail − Integrate GMail into the GNOME desktop

SYNOPSIS

gnome-gmail [<*mailto-URL*>]

DESCRIPTION

The **gnome-gmail** script opens a GMail page on the default web browser, with a message composed according to the supplied RFC2368 *mailto:* URL. This script is used to support GMail as a GNOME Preferred Application for email.

OPTIONS

A *mailto:* URL. The ’To’, ’CC’, ’BCC’, ’Subject’, and ’Body’ fields are supported. If the argument is not well formed, it is assumed to be the recipient. If no argument is supplied, a default GMail page is opened.

FILES

~/.config/gnome-gmail/gnome-gmail.conf - Configuration file

BUGS

No known bugs.
