NAME
gnome-gmail − Integrate GMail into the GNOME desktop

SYNOPSIS
gnome-gmail [**−r** *file*|<*mailto-URL*>] [**−−send**]

DESCRIPTION
The **gnome-gmail** script opens a GMail page on the default web browser, with a message composed according to the supplied RFC2368 *mailto:* URL. This script is used to support GMail as a GNOME Preferred Application for email.

OPTIONS
A *mailto:* URL. The 'To', 'CC', 'BCC', 'Subject', and 'Body' fields are supported. The 'Attach' keyword is used to identify files to be attached to the message. If the argument is not well formed, it is assumed to be the recipient. If no argument is supplied, a default GMail page is opened.

−s, −−send
> send immediately

−r *file*, **−−rfc** *file*
> send the RFC822-formatted file *file*

FILES
~/.config/gnome-gmail/gnome-gmail.conf - Configuration file

BUGS
No known bugs.
